G.L. Bajaj Institute of Technology & Management, Greater
Noida

ABOUT ME

Motivated second-year B.Tech student specializing in Computer Science with Artificial Intelligence & Machine Learning (CS-AIML). Passionate about software development, machine learning, system optimization, and problem-solving. Experienced in building intelligent systems, self-hosting services, and developing efficient algorithmic solutions. Strong interest in AI-driven applications, backend systems, and competitive programming.

EDUCATION

2024 – Present

G.L. Bajaj Institute of
Technology &
Management

Bachelor of Technology (B.Tech) – CS-AIML

- Currently pursuing specialization in Artificial Intelligence & Machine Learning
- Strong focus on Data Structures & Algorithms, Machine Learning, and System Design

TECHNICAL SKILLS

Programming Languages

- Python
- C
- C++
- Java

Technologies & Tools

- Docker
- Self Hosting
- Git & GitHub
- Prompt Engineering

Domains

- Machine Learning
- Reinforcement Learning
- Heuristic-Based Algorithms
- Backend & System Optimization

ACHIEVEMENTS

Critical Mass Hackathon – IIT Patna

4th Position

Secured 4th place among multiple competing teams in a national-level hackathon conducted by IIT Patna.

Knowledge Quarry Hackathon – DU CIC

2nd Position

Achieved 2nd place for developing innovative technical solutions and demonstrating strong problem-solving skills.

PROJECTS

Chain Reaction Game Winning Bot

- Developed an intelligent bot capable of playing and winning the Chain Reaction strategy game
- Implemented strong heuristic-based decision-making algorithms to optimize gameplay
- Focused on state evaluation, move prediction, and strategic optimization

AI-Based Railway Crossing Traffic Simulator

- Designed a smart traffic simulation system for railway level crossings to minimize congestion and waiting time
- Integrated Gradient Boosting Machine Learning model for prediction and optimization
- Implemented LinUCB Reinforcement Learning algorithm for adaptive traffic control

- Improved traffic flow efficiency through intelligent signal management and dynamic decision-making

Smart Plant Watering System

- Built an IoT-based smart watering system using ESP32 as the central microcontroller
- Integrated soil moisture sensor (capacitance-based) to detect real-time soil moisture levels
- Collected and processed environmental data including humidity, soil moisture, and temperature
- Applied Machine Learning on the dataset to predict and determine optimal watering needs of the plant
- Automated irrigation decisions based on ML-driven insights for efficient water usage

STRENGTHS

- | | |
|----------------------|-----------------------|
| • Problem Solving | • Fast Learner |
| • Team Collaboration | • Analytical Thinking |
| • Adaptability | • Innovation Driven |

INTERESTS

- | | |
|---------------------------------|---------------------------|
| • Artificial Intelligence | • Machine Learning |
| • System Design | • Competitive Programming |
| • Self Hosting & Infrastructure | • Open Source Development |
